-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Objections

Claims 6 and 7 are objected to because they are duplicates of claims 3 and 4, respectively. Appropriate correction is required.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Tertinek et al. (U.S. Patent 4,323,980).

Tertinek et al. discloses a handle including a handle shaft (82) attached to a power tool at a point of attachment (at 84). There is a branch handle (136) parallel with and attached to the handle shaft. The branch handle includes grips (132). There is a resilient member (148) arranged as claimed in an attachment point between the branch handle and handle shaft (Figure 6, for example). Tertinek et al. does not teach the flange and teaches only a single point of attachment between the branch handle and handle shaft. Flanges are well known to use as attachment means and it would have been obvious to one of ordinary skill in the art at the time the invention was made to have used a flange in order to, for example, obtain a configuration more readily replaceable than the welded attachment shown in Figure 7, for example. the upper and lower attachment points, it is well known to use multiple attachment points. It would have been obvious to one of ordinary skill in the art at the time the invention was made to have included a lower attachment point with Tertinek et al. in order to, for example, increase stability of the branch handle. This would essentially be a duplication of parts, which is not a patentably distinguishing feature.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Gary Hartmann whose telephone number is 571-272-6989. The examiner can normally be reached on Monday through Thursday, 9am-7pm.
